Retro-fit option

Lifts internal temperature by 10°C *

** when heater is used in conjunction with slab insulation*

*Fitted insulation dimensions:-
510w x 470d x 820h (mm)*

INTRODUCTION

Designed to provide frost protection for our range of free-standing pressurisation units.

The full kit includes a 45watt 230v tube heater operated by a frost thermostat adjustable between 5-10°C and a fully interlocking slab insulation jacket.

When the heater is used in conjunction with the slab insulation the temperature is lifted by 10°C.

FITTING

Where frost protection kits are ordered with new pressurisation units, we pre-fit the heater and thermostat. The simple-to-fit slab insulation jacket is applied on site by the customer.

When supplying kits for retro-fitting, all necessary fittings are supplied including full fitting instructions.
